

Contents

I	Introduction	1
1	Casting and computer-aided design systems	3
1.1	Manufacturing processes	4
1.2	The casting process	6
1.3	Automated computer-aided design systems	9
1.4	Geometric aspects of the casting process	12
1.5	Casting with opposite cast removal	14
1.6	Casting with directional uncertainty	15
1.7	Casting with skewed ejection direction	16
1.8	The reflex-free hull	17
1.9	Coloring algorithm for finding cavities	18
2	Preliminaries	19
2.1	The model of the casting process	19
2.2	Object models and other definitions	20
2.3	Arrangement	22
II	Castability	23
3	Opposite cast removal	25
3.1	Introduction	25
3.2	Testing a direction	28
3.3	Finding a direction	36
3.4	Experimental results	40

4	Directional uncertainty	45
4.1	Introduction	45
4.2	Preliminaries	46
4.3	Finding a cast	47
4.4	Computing feasible directions	56
5	Skewed ejection direction	59
5.1	Introduction	59
5.2	A characterization of castability	61
5.3	Feasibility test for a polyhedron	63
5.3.1	Testing emptiness of the black shadow	65
5.3.2	Testing emptiness of the black shadow volume	66
5.3.3	Cast part construction	70
5.4	Finding a pair of directions	73
III	The Reflex-free hull and Cavities	77
6	The reflex-free hull	79
6.1	Introduction	79
6.2	Preliminaries	80
6.3	The reflex-free hull	83
6.4	The reflex-free hull of a polyhedron	84
6.5	The reflex-free hull and cavities	87
6.6	Other hulls	90
7	Cavities and castability analysis	93
7.1	Introduction	93
7.2	Definitions and assumptions	94
7.3	Theorems for coloring faces	95
7.4	An implementation for coloring faces	103
7.5	Further applications to casting	104
	Concluding remarks	105
	Bibliography	107
	Index	112
