1	Introduction	9
2	Scattering and bound states	15
2.1	Single-channel scattering: an example	15
2.2	Single-channel scattering: formal treatment	20
2.3	Example of a Feshbach resonance	23
3	Many-body theory for Feshbach-resonant interactions	31
3.1	Bare atom-molecule theory	31
3.2	Ladder summations	40
3.3	Effective atom-molecule theory	46
4	Normal state	49
4.1	Two-atom properties of the many-body theory	49
4.1.1	Scattering properties	49
4.1.2	Bound-state energy	50
4.1.3	Molecular density of states	52
4.2	Equilibrium properties	56
4.3	Many-body effects on the bound-state energy	61
5	Mean-field theories for the Bose-Einstein condensed phase	67
5.1	Popov theory	67
5.1.1	Time-independent mean-field equations	67
5.1.2	Time-dependent mean-field equations	71
5.2	Hartree-Fock-Bogoliubov theory	74
6	Coherent atom-molecule oscillations	81
6.1	Experiments	81
6.2	Josephson frequency	88
6.3	Beyond linear response	94

7 Conclusions and outlook	99
Bibliography	101
Samenvatting	107
Dankwoord	113
Curriculum Vitae	115
