Preface	xi
1 Sets and the continuum before 1907	1
1.1 Cantor (1845–1918)	2
1.1.1 The discovery of non-equivalent infinite sets	4
1.1.2 On the equivalence of R_1 and R_n	5
1.1.3 On linearly ordered point sets	6
1.1.4 Irrational numbers, the continuum, the continuum hypothesis, reducible and perfect sets	7
1.1.5 Generation principles (Erzeugungsprinzipien) and the Limitation principle (Hemmungsprinzip) for finite and transfinite numbers	10
1.1.6 The Cantor-Bernstein theorem and the definition of further new concepts	12
1.1.7 Beitrage zur Begründung der transfiniten Mengenlehre	13
1.1.8 The linear continuum	14
1.1.9 Order types	15
1.1.10 Fundamental sequences and perfect sets	17
1.1.11 Well-ordering	17
1.2 Dedekind (1831–1916)	19
1.3 Poincaré (1854–1912)	23
1.3.1 The first stage in the construction of the mathematical continuum	24
1.3.2 The second stage	24
1.3.3 The measurable quantity	25
1.3.4 A continuum of the third order?	25
1.3.5 Mathematical existence and complete induction	26
1.4 Zermelo (1871–1953)	27
1.5 Schoenflies (1853–1928)	28
1.6 Bernstein (1878–1956)	28
1.7 The paradoxes	30
1.8 Final remarks	31

2	Brouwer's ur-intuition of mathematics	33
2.1	Introduction	33
2.2	The dissertation about the ur-intuition	35
2.3	Mannoury's opposition	39
2.4	Barrau's objections against the ur-intuition	40
2.5	The ur-intuition in the Rome and Vienna lectures	42
2.6	Interpretation of the ur-intuition	43
2.6.1	The construction of natural numbers	44
2.6.2	The rational numbers	46
2.7	The ur-intuition in the inaugural lecture	48
2.8	The ur-intuition in the notebooks	50
2.9	On the status of spoken or written signs	56
2.10	The notebooks on spoken or written signs	60
2.11	Summary and conclusions of this chapter	61
3	The continuum, intuitive and measurable	63
3.1	Introduction	63
3.1.1	Aristotle	64
3.1.2	Georg Cantor	65
3.1.3	Hermann Weyl	65
3.1.4	Otto Hölder	67
3.1.5	Émile Borel	68
3.1.6	A modern sound	69
3.2	A few other publications by Brouwer	69
3.3	Properties of the intuitive continuum	75
3.4	The notebooks and the intuitive continuum	84
3.4.1	The continuum, its possible construction from logical principles alone	85
3.4.2	The continuum, the intuition	86
3.4.3	The physical continuum	88
3.4.4	The mathematical versus the intuitive continuum	89
3.4.5	The mathematical continuum is the measurable continuum with rational scale	90
3.4.6	The continuum is no point set	91
3.4.7	The vast majority of the irrational numbers can only be approximated and not defined	92
3.4.8	The continuum; is there a way to get more grip on it, apart from a constructed scale on it?	95
3.4.9	The second number class does not exist as a finished totality	99
3.4.10	Attempts to introduce the 'in practice unmeasurable numbers'	101
3.4.11	Pro and contra the pure and intangible continuum	105
3.5	Summary and conclusions	111

4	The possible point sets	113
4.1	Introduction	113
4.2	Set construction	114
4.3	The principle of the excluded middle	121
4.4	The third construction rule	122
4.5	The review of Schoenflies' Bericht	126
4.6	The lecture notes 1915/'16 on Set theory	128
4.7	Addenda and corrigenda to the dissertation	130
4.8	The 'Begründung' papers, 1918/19	133
4.9	Intuitionistische Mengenlehre, 1919	135
4.10	The notebooks on set formation	137
4.10.1	Sets, general	137
4.10.2	Sets, constructibility as condition for their existence	139
4.10.3	Sets and the Russell-paradox	142
4.10.4	Sets, limitations resulting from the method of construction	142
4.10.5	The perfect set cannot be constructed	144
4.10.6	The second number class	145
4.10.7	A third and a fourth cardinality	146
4.10.8	Later developments, suggested in the notebooks	147
4.11	Concluding remarks about sets	161
5	The 'continuum problem'	165
5.1	Introduction	165
5.2	The solution in the dissertation	166
5.3	Two other publications on this problem	170
5.3.1	The Rome lecture	170
5.3.2	The inaugural address	171
5.4	The dissertation again	173
5.5	The notebooks and the continuum problem	174
5.6	Concluding remarks	177
6	Mathematics and experience	179
6.1	Introduction	179
6.2	Man's desire for knowledge and control	181
6.2.1	Comments on Brouwer's views on physics	186
6.2.2	The notebooks on causality and man's desire to rule	196
6.3	Poincaré's <i>La Science et l'Hypothèse</i>	203
6.3.1	Brouwer's comment on Poincaré	205
6.4	Space, time, objectivity and apriority	210
6.4.1	Kant's point of view, compared to that of Russell and Brouwer	215
6.5	Conclusions	220

7	The role of logic	221
7.1	Introduction	221
7.2	Brouwer's introduction to chapter III	228
7.2.1	The notebooks on the building metaphor and on the hypothetical judgement; the 'building in a building'	237
7.2.2	Conclusions about Brouwer's concept of the hypothetical judgement	239
7.2.3	Elaboration and examples of the 'particular case' of the concept of 'building-in-a-building'	240
7.2.4	Concluding remarks about the introduction to chapter III	244
7.3	The unreliability of the logical principles	247
7.4	The notebooks on the role of logic	250
7.5	The founding of mathematics on axioms	252
7.5.1	The notebooks on Axiomatic foundations	261
7.6	Cantor's transfinite numbers	264
7.6.1	The second number class	264
7.6.2	The denumerably unfinished sets	266
7.6.3	The Mannoury review on the denumerably unfinished sets and Brouwer's reply to it	279
7.6.4	The notebooks on Cantor's transfinite numbers	285
7.6.5	The notebooks on the denumerably unfinished set	286
7.6.6	The remainder of Brouwer's second example	289
7.7	The Peano-Russell logistics	289
7.7.1	Introduction	289
7.7.2	The paradoxes	290
7.7.3	The notebooks on the Russell paradox	293
7.8	The logical foundations à la Hilbert	296
7.8.1	Introduction	296
7.8.2	The content of Hilbert's Heidelberg lecture	297
7.8.3	Brouwer's comment on Hilbert's Heidelberg lecture	302
7.8.4	Poincaré's criticism	304
7.8.5	The notebooks on the Foundations after Hilbert	307
7.9	Conclusions	309
8	The Summary, the Theses and Conclusions	311
8.1	Introduction	311
8.2	The summary of Brouwer's dissertation	311
8.3	The theses	316
8.4	Summary of our conclusions	324
	Appendix	
	Brouwer's own bibliography	327
	Samenvatting	355
	Curriculum Vitae	359
