

# Contents

<b>CHAPTER 1: Introduction</b>	<b>9</b>
<b>1 Biomass and greenhouse gas mitigation</b>	<b>9</b>
<b>2 Multi-functional biomass systems</b>	<b>12</b>
2.1 Multiple use of resources	13
2.2 Multi-product use and cascading	14
2.3 Multi-functional biomass systems	14
<b>3 Efficiency of biomass systems</b>	<b>16</b>
3.1 Savings of non-renewable energy consumption	17
3.2 GHG emission reductions	17
3.3 Agricultural land use	19
3.4 Costs of biomass systems	20
3.5 Efficiency of multi-functional biomass systems	21
<b>4 Objective and scope of this thesis</b>	<b>21</b>
<b>CHAPTER 2: Economic and greenhouse gas emission analysis of bioenergy production using multi-product crops - Case studies for the Netherlands and Poland</b>	<b>25</b>
<b>1 Introduction</b>	<b>26</b>
<b>2 Approach</b>	<b>29</b>
2.1 Multi-product crop systems	29
2.2 Calculation method	30
<b>3 Input data</b>	<b>31</b>
3.1 Yield, costs, energy demand and GHG emissions of crop production	32
3.2 Prices and GHG substitution factors of biomass material	35
3.3 GHG substitution factors of biomass energy	37
<b>4 Performance of multi-product systems</b>	<b>38</b>
4.1 Net annual GHG emission reductions per ha	38
4.2 Primary biomass fuel costs	40
4.3 Variation of crop production objective	43
4.4 Monte-Carlo analysis	45
<b>5 Discussion</b>	<b>49</b>
<b>6 Summary and conclusions</b>	<b>50</b>

<b>CHAPTER 3: Cost and CO<sub>2</sub>-emission reduction of biomass cascading - Methodological aspects and case study of SRF poplar</b>	<b>53</b>
<b>1 Introduction</b>	<b>54</b>
<b>2 Methodology</b>	<b>56</b>
2.1 System boundaries of biomass and reference system	56
2.2 Land use	58
2.3 Time dimension	59
2.4 Definition of functional units	62
2.5 Calculation method	62
<b>3 Cascading chains of short rotation poplar</b>	<b>63</b>
3.1 Applications	63
3.2 Cascading chains	64
3.3 Input data	65
<b>4 Results</b>	<b>67</b>
4.1 Base case results	67
4.2 Sensitivity analysis	70
<b>5 Discussion and conclusions</b>	<b>74</b>
5.1 Potential benefits of cascading	75
5.2 Quantitative results of the case study	76
5.3 Bottom-up analysis	76
5.4 Methodological framework	77
5.5 Further research	77
<b>Appendix 1: Application of short rotation poplar</b>	<b>79</b>
A 1.1 Overview and selection	79
A 1.2 Recycling	82
<b>Appendix 2: Input data</b>	<b>84</b>
<b>CHAPTER 4: Comparing the land requirements, energy savings, and greenhouse gas emissions reduction of bio-based polymers and bioenergy - An analysis and system extension of life-cycle assessment studies</b>	<b>87</b>
<b>1 Introduction</b>	<b>88</b>
<b>2 LCA studies of bio-based polymers</b>	<b>90</b>
2.1 Non-renewable energy savings and GHG emission reduction	91
2.2 Inclusion of land demand and agricultural residues	91
<b>3 Methodology</b>	<b>94</b>
3.1 Energy savings and GHG emission reduction without utilisation of residues	94
3.2 Energy savings and GHG emission reduction by utilisation of residues	96
3.3 Comparison with bioenergy	97
<b>4 Agricultural production and energy use of agricultural residues</b>	<b>98</b>
<b>5 Results</b>	<b>101</b>
5.1 Energy savings and GHG emission reduction per hectare	101
5.2 Comparison of bio-based polymers and bioenergy only	104
<b>6 Sensitivity analysis</b>	<b>106</b>
<b>7 Discussion</b>	<b>109</b>
7.1 Methodological differences between the LCA studies	109
7.2 Removal of agricultural residues	109
7.3 Technological development	111
7.4 Secondary savings	111
<b>8 Conclusions</b>	<b>112</b>

<b>CHAPTER 5: Economics and GHG emission reduction of a PLA bio-refinery system - Combining bottom-up analysis with price elasticity effects</b>	<b>115</b>
<b>1 Introduction</b>	<b>116</b>
<b>2 Methodology</b>	<b>120</b>
2.1 Chain analysis	120
2.2 Market analysis	122
<b>3 PLA bio-refinery system</b>	<b>125</b>
3.1 Biomass production	125
3.2 Bioenergy	127
3.3 PLA production	128
3.4 Substitution of reference products	130
3.5 Recycling and waste treatment	132
3.6 Transport	134
3.7 Demand curves	135
<b>4 Results</b>	<b>136</b>
4.1 Performance of the PLA bio-refinery system	136
4.2 Costs in relation to scale	141
<b>5 Discussion</b>	<b>143</b>
<b>6 Conclusions</b>	<b>145</b>
<b>CHAPTER 6: Estimating GHG emission mitigation supply curves of large-scale biomass use on a country level</b>	<b>147</b>
<b>1 Introduction</b>	<b>148</b>
<b>2 Method</b>	<b>150</b>
2.1 Biomass supply curve I	152
2.2 Biomass supply curve II	154
2.3 GHG emission mitigation cost curve I	155
2.4 GHG emission mitigation cost curve II	157
<b>3 Input data</b>	<b>159</b>
3.1 Biomass supply and land markets	159
3.2 Biomass applications and their markets	162
<b>4 Results</b>	<b>167</b>
4.1 Biomass supply curves	167
4.2 GHG emission mitigation cost curves	168
4.3 GHG emission mitigation supply curves	169
4.4 Comparison of scenarios	172
4.5 Sensitivity analysis	173
<b>5 Discussion</b>	<b>175</b>
<b>6 Conclusions</b>	<b>177</b>
<b>Summary and conclusions</b>	<b>179</b>
<b>Sammenvatting en conclusies</b>	<b>186</b>
<b>Zusammenfassung und Schlussfolgerungen</b>	<b>194</b>
<b>References</b>	<b>203</b>
<b>Dankwoord</b>	<b>215</b>
<b>Curriculum Vitae</b>	<b>216</b>
