

## Contents

### Preface **5**

1. Introduction **7**
2. Web Navigation - Behavioral and Cognitive Perspectives **11**
  - 2.1. Instances and description of Web navigation behavior **11**
    - 2.1.1. What is the Web used for? Domains and tasks **12**
    - 2.1.2. The information space **13**
    - 2.1.3. What do users do? Web navigation behavior **14**
  - 2.2. Individual differences in Web navigation **16**
  - 2.3. Cognitive processes involved in Web navigation **16**
    - 2.3.1. Web navigation as a reading comprehension process **17**
    - 2.3.2. Web navigation as information foraging. Information Scent **18**
    - 2.3.3. Spatial cognition involved in Web navigation **19**
    - 2.3.4. Cognitive models of Web navigation **20**
      - 2.3.4.1. SNIF-ACT: Scent-based Navigation and Information Foraging in the ACT architecture **21**
      - 2.3.4.2. CoLiDeS: A Comprehension-based *Linked* model of Deliberate Search **21**
      - 2.3.4.3. MESA: Method for Evaluating Site Architectures **22**
    - 2.3.5. Value and limitations of existing theories and models of Web navigation **23**
  - 2.4. Practical constraints and opportunities **24**
    - 2.4.1. Web Human Factors and Web Usability **25**
    - 2.4.2. Navigation support **26**
    - 2.4.3. User models and personalization **27**
3. Methodological Issues **29**
  - 3.1. Measuring and analyzing Web navigation behavior **29**
    - 3.1.1. On-line collecting and mining of Web navigation data **30**
  - 3.2. Cognitive modeling of Web navigation behavior **32**
    - 3.2.1. Modeling as a methodological approach **32**
    - 3.2.2. Common user versus individual differences **33**
    - 3.2.3. Cognitive modeling as source for support **33**
    - 3.2.4. Computational techniques: Latent semantic analysis (LSA) **35**
4. Model Development and Empirical Studies **39**
  - 4.1. Task analysis **39**
    - 4.1.1. Task domains, instances and criteria **39**
    - 4.1.2. Metrics of navigation behavior **42**
      - 4.1.2.1. First-order metrics **43**
      - 4.1.2.2. Second-order metrics (Navigation styles and Reading time) **46**
      - 4.1.2.3. Semantic metrics **50**
  - 4.2. Individual differences in Web navigation – empirical findings **53**

4.2.1.	Research Objectives and Questions	<b>53</b>
4.2.2.	Methodology	<b>54</b>
4.2.3.	Results	<b>60</b>
4.2.3.1.	Predicting Task Outcomes Based on Hypothesized Factors	<b>61</b>
4.2.3.2.	Predicting User Characteristics Based on Navigation Metrics	<b>62</b>
4.2.3.3.	Predicting Task Outcomes Based on Navigation Metrics	<b>63</b>
4.2.3.4.	Predicting Task Outcomes Based on Hypothetical Factors and Navigation Metrics	<b>63</b>
4.2.4.	Conclusion and discussion	<b>64</b>
4.2.4.1.	Summary of results and conclusions	<b>64</b>
4.2.4.2.	Discussion and implications	<b>65</b>
4.2.5.	Additional analyses based on data from other studies	<b>66</b>
4.3.	Modeling cognitive processes involved in Web navigation	<b>68</b>
4.3.1.	Cognitive model	<b>68</b>
4.3.1.1.	CoLiDeS+	<b>69</b>
4.4.	Study "Voice suggestions"	<b>75</b>
4.4.1.	Method	<b>76</b>
4.4.2.	Results	<b>77</b>
4.4.2.1.	How much "plus" does CoLiDeS+ bring in?	<b>77</b>
4.4.2.2.	Effect of navigation support on task performance	<b>78</b>
4.4.2.3.	Effect of navigation support on task performance for users with low spatial ability	<b>79</b>
4.4.3.	Conclusion	<b>80</b>
4.5.	Study "Graphical suggestions"	<b>81</b>
4.5.1.	Method	<b>82</b>
4.5.2.	Results	<b>83</b>
4.5.3.	Conclusions and discussion	<b>87</b>
5.	Extension and Applicability of Model Development	<b>91</b>
5.1.	Study "Visually Impaired Persons"	<b>91</b>
5.1.1.	Problem definition and background	<b>92</b>
5.1.2.	Method	<b>93</b>
5.1.2.1.	Website and Tasks	<b>93</b>
5.1.2.2.	Experimental manipulation	<b>94</b>
5.1.2.3.	Measures, Subjects and Procedure	<b>95</b>
5.1.3.	Results	<b>96</b>
5.1.3.1.	Particularities and commonalities of using the Web via a screen reader versus via a graphical screen	<b>96</b>
5.1.3.2.	Effectiveness of the "suggestion" mechanism	<b>96</b>
5.1.3.3.	Impact of suggestions on users	<b>97</b>
5.1.4.	Conclusion and discussion	<b>98</b>
5.2.	Toward a fully computational cognitive model of Web navigation	<b>98</b>

5.2.1. An ACT-R model of Web navigation	<b>100</b>
5.2.1.1. Forward linear navigation	<b>105</b>
5.2.1.2. Backtracking and lowering the threshold	<b>105</b>
5.2.1.3. Coherence with past selections	<b>106</b>
5.2.1.4. Conservative and explorative strategies intertwined	<b>106</b>
5.2.1.5. Post-valued recall	<b>107</b>
5.2.2. Conclusion and discussion	<b>107</b>
6. Conclusions and Discussion	<b>109</b>
6.1. Summary of contributions	<b>109</b>
6.1.1. Contributions to the fields of Information Science and Human-Computer Interaction	<b>109</b>
6.1.1.1. Facts regarding the use of Web applications	<b>109</b>
6.1.1.2. Methods to gather and interpret information about user behavior	<b>111</b>
6.1.1.3. Ways to conceive and deliver effective Web navigation support	<b>113</b>
6.1.2. Contributions to the fields of Cognitive Science and Hypertext Comprehension	<b>114</b>
6.1.2.1. Amendments to existing models of Web navigation	<b>114</b>
6.1.2.2. Well-established theories applied in new settings	<b>114</b>
6.2. Conclusions	<b>116</b>
6.2.1. What are the most important factors determining success in Web-assisted tasks? How can one measure or estimate these factors in an automatic way?	<b>116</b>
6.2.2. What are the explanatory cognitive mechanisms for the identified factors? How can one implement these mechanisms in a (computational) cognitive model?	<b>116</b>
6.2.3. What kind of Web navigation support can be conceived based on the knowledge gained from the previous questions? What impact has this support on users?	<b>117</b>
6.3. Discussion and future developments	<b>117</b>
