

Table of contents

Preface

Chapter 1: Introduction	1
1. The topic of mechanics	2
2. Overcoming difficulties in learning mechanics	2
3. Research question and method	4
4. Content of this thesis	5
Chapter 2: Background	7
1. Introduction	8
2. Teaching/learning mechanics in the literature	8
2.1. Goals	9
2.2. Problem analyses	10
2.3. Approach	17
2.4. Method and results	23
3. Critical discussion	27
3.1. Goals	27
3.2. Problem analysis	28
3.3. Approach	42
3.4. Method and results	46
4. Summary	51
Chapter 3: Backgrounds of the design	53
1. Introduction	54
2. The explanatory scheme	55
2.1. Causal explanation, in particular of motion	55
2.2. Relevance of the explanatory scheme for mechanics teaching	60
2.3. Triggering and explicating the explanatory scheme	63
3. Research question and method	68
4. Theoretical guidelines for the design	70
4.1. View on teaching and learning	71
4.2. Use of earlier problem posing designs	73
5. Summary	79
Chapter 4: Development from first to second design	81
1. Introduction	82
2. The content from first to second design	83
2.1. The how and why of explaining motions	84
2.2. Extending students' knowledge by detailing the explanatory scheme to arrive at empirically adequate models for explaining planetary motion	97

2.3.	Evaluation of models and types of model in the light of Achieving broader applicability	116
2.4.	Embedding in the regular mechanics course	125
3.	Teacher preparation from first to second design	130
3.1.	Goal and problems	130
3.2.	First preparation + some results leading to revision	132
3.3.	Ideas for second preparation: interaction structures	136
4.	Concluding remarks	143
Chapter 5: Scenario		145
1.	Introduction	146
2.	Episodes in the second design	146
2.1.	First main theme	148
2.2.	Second main theme	149
2.3.	Third main theme	153
3.	The how and why of explaining motions.	154
4.	Extending students' knowledge by detailing the explanatory scheme to arrive at empirically adequate models for explaining planetary motion	165
5.	Evaluation of models and types of model in the light of achieving broader applicability	185
6.	Concluding remarks	194
Chapter 6: Results		195
1.	Introduction	196
2.	Methodology	197
3.	Teacher preparation	198
4.	The how and why of explaining motion	200
5.	Extending students' knowledge by detailing the explanatory scheme to arrive at empirically adequate models for explaining planetary motion	220
6.	Evaluation of models and types of model in the light of achieving broader applicability	242
7.	Choices for interaction structures	253
8.	Embedding in the regular mechanics course	253
9.	Concluding remarks	261
Chapter 7: Reflection		263
1.	Introduction	264
2.	Are the goals met?	264
3.	Are the starting points still useful in meeting the goals?	267
4.	Some aid from the literature?	270
5.	Possible solutions and further research	273
5.1.	Educationalising practices	273
5.2.	Using interaction structures	276
5.3.	Other explanatory schemes?	279

Appendix: FCI items used in interviews	281
References	285
Summary	291
Samenvatting	303
Curriculum vitae	317
